Photo why its important that there la a numur around Washington of a bit llon dollar estimate for national defense in the fincal year 1938

Since 1922 the combined appropriations for the army and navy have been running between 600 million and approximately 800 million delians. Because the appropriations were finalled separately no one gave them much altention except for a few days when the appropriation bills were I use ! by congress

But a hillion dollars is different 11 is an easy figure to remember. Even in these days of lavish spending a billion still topre sents the ultimate in big finance No ordi nary man has anything in his experience anabling him to conceive of that much money but its a familiar figure

It will make a difference therefore in popular awareness of what national de fense means to the country if the gen cials and admirals let themselves got into the billion dollar class There will be for instance an increasing disposition to ques tion them as to the identity of the for which the United States is going to fight At the same time one may be certain that this country's potential enemies will begin to get extremely nervous

The im, artance of the move lies in its apness as another illustration of the sub-surface zeal and sharpness of Mr. Roosevolts campilion which is not supposed to have started vet. For the last few weeks his aim has been to keen one jump or more ahead of his opposition to look ahead to plan ahead to offset in advance (bot also his anlicipation of the Hearst attack 24 hours before it was mode).
